

# GAL16V8/883

High Performance E<sup>2</sup>CMOS PLD Generic Array Logic™

#### **Features**

- · HIGH PERFORMANCE E2CMOS® TECHNOLOGY
- 7.5 ns Maximum Propagation Delay
- -Fmax = 100 MHz
- 6 ns Maximum from Clock Input to Data Output
- TTL Compatible 12 mA Outputs
- UltraMOS® Advanced CMOS Technology
- 50% REDUCTION IN POWER FROM BIPOLAR
- 75mA Typ Icc
- ACTIVE PULL-UPS ON ALL PINS (GAL16V8D-7 and GAL16V8D-10)
- E2 CELL TECHNOLOGY
- Reconfigurable Logic
- Reprogrammable Cells
- 100% Tested/100% Yields
- High Speed Electrical Erasure (<100ms)</li>
- 20 Year Data Retention
- · EIGHT OUTPUT LOGIC MACROCELLS
  - Maximum Flexibility for Complex Logic Designs
  - Programmable Output Polarity
  - Also Emulates 20-pin PAL® Devices with Full Function/ Fuse Map/Parametric Compatibility
- PRELOAD AND POWER-ON RESET OF ALL REGISTERS
  - 100% Functional Testability
- · APPLICATIONS INCLUDE:
  - DMA Control
  - State Machine Control
  - High Speed Graphics Processing
  - Standard Logic Speed Upgrade
- ELECTRONIC SIGNATURE FOR IDENTIFICATION

# **Functional Block Diagram**

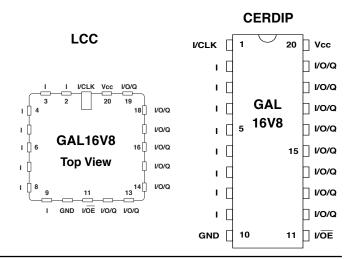

### **Description**

The GAL16V8/883 is a high performance E²CMOS programmable logic device processed in full compliance to MIL-STD-883. This military grade device combines a high performance CMOS process with Electrically Erasable (E²) floating gate technology to provide the highest speed/power performance available in the 883 qualified PLD market. The GAL16V8D/883, at 7.5ns maximum propagation delay time, is the world's fastest military qualified CMOS PLD.

The generic GAL architecture provides maximum design flexibility by allowing the Output Logic Macrocell (OLMC) to be configured by the user. The GAL16V8/883 is capable of emulating all standard 20-pin PAL® devices with full function/fuse map/parametric compatibility.

Unique test circuitry and reprogrammable cells allow complete AC, DC, and functional testing during manufacture. Therefore, Lattice Semiconductor delivers 100% field programmability and functionality of all GAL products. In addition, 100 erase/write cycles and data retention in excess of 20 years are specified.

# Specifications GAL16V8D-7/10/883

#### **Absolute Maximum Ratings**(1)

Supply voltage V <sub>cc</sub>	–0.5 to +7V
Input voltage applied	–2.5 to V <sub>CC</sub> +1.0V
Off-state output voltage applied	–2.5 to V <sub>CC</sub> +1.0V
Storage Temperature	–65 to 150°C
Case Temperature with	
Power Applied	–55 to 125°C

<sup>1.</sup>Stresses above those listed under the "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress only ratings and functional operation of the device at these or at any other conditions above those indicated in the operational sections of this specification is not implied (while programming, follow the programming specifications).

### **Recommended Operating Conditions**

Case Temperature ( $T_{\rm C}$ ) ...... –55 to 125°C Supply voltage ( $V_{\rm CC}$ ) with Respect to Ground ...... +4.50 to +5.50V

#### **DC Electrical Characteristics**

#### Over Recommended Operating Conditions (Unless Otherwise Specified)

SYMBOL	PARAMETER		CONDITION		MIN.	TYP.3	MAX.	UNITS
VIL	Input Low Voltage				Vss - 0.5	_	0.8	V
<b>V</b> IH	Input High Voltage				2.0	_	Vcc+1	V

Input or I/O to Output Enable/Disable

**OE to Output Enable/Disable** 

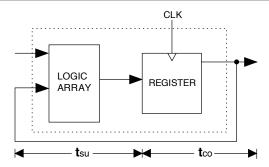

fmax with Feedback

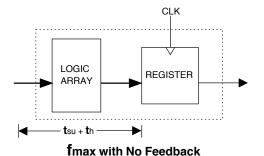

#### **fmax Descriptions**

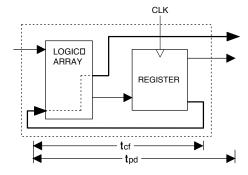

fmax with External Feedback 1/(tsu+tco)

**Note:** fmax with external feedback is calculated from measured tsu and tco.

**Note:** fmax with no feedback may be less than 1/(twh + twl). This is to allow for a clock duty cycle of other than 50%.

fmax with Internal Feedback 1/(tsu+tcf)

Note: tcf is a calculated value, derived by subtracting tsu from the period of fmax w/internal feedback (tcf = 1/fmax - tsu). The value of tcf is used primarily when calculating the delay from clocking a register to a combinatorial output (through registered feedback), as shown above. For example, the timing from clock to a combinatorial output is equal to tcf + tpd.

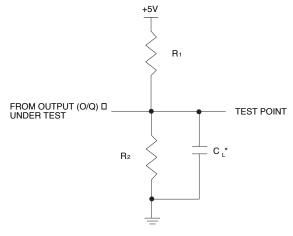

# **Switching Test Conditions**

Input Pulse Levels	GND to 3.0V
Input Rise and Fall Times	3ns 10% – 90%
Input Timing Reference Levels	1.5V
Output Timing Reference Levels	1.5V
Output Load	See Figure

3-state levels are measured 0.5V from steady-state active level.

#### **Output Load Conditions (see figure)**

Tes	t Condition	R <sub>1</sub>	R <sub>2</sub>	CL
Α		390Ω	750Ω	50pF
В	Active High	∞	$750\Omega$	50pF
	Active Low	390Ω	750Ω	50pF
С	Active High	∞	750Ω	5pF
	Active Low	390Ω	750Ω	5pF

 $^{\star}\mathrm{C}_{\,\mathrm{L}}$  INCLUDES TEST FIXTURE AND PROBE CAPACITANCE
